

Zirius' IT Support for Small Business

Monitored & Managed Anti-Virus

Now the steady hands of Zirius can watch your anti-virus too,
like the rest of your network.

Fix the weak link!

Anti-virus can be the weak link in computer security. Sometimes it stops working, or stops automatic updating.

**If your software gets old...
it'll spoil.**

With Zirius' managed antivirus

- No hardware or software investment
- No longer term commitment
- Monthly subscription covers monitoring, unlimited tech support for the service, and frequent updates.

Note: No anti-virus is guaranteed. Organized crime groups constantly create new ones, attempting to steal data and hijack computers by neutralizing anti-virus protection.

In the event that a computer we protect becomes infected, we will repair any damage to the antivirus software, but may charge you to clean your computer.

AV Comparatives

Internet Security Product of the Year
December 2011

Our service uses the excellent Internet Security engine of F-Secure, based in Iceland.

We prefer this European solution to the Americans (McAfee, Symantec, etc.) that focus on marketing but deliver bloated, less effective anti-virus products.

For Windows PCs and Macs, file servers, Microsoft Exchange servers and mobile devices

Workstations: \$10/month
Servers: \$12/month
Installation: \$20/computer
